

daily GOOD

The deeper we look into nature, the more we recognize that it is full of life, and the more profoundly we know that all life is a secret and that we are united with all life that is in nature. --Albert Schweitzer

The Encyclopedia of Life

Comprehensive, collaborative, ever-growing, and personalized, the Encyclopedia of Life is an ecosystem of websites that makes all key information about life on Earth accessible to anyone, anywhere in the world. Its goal is to create a constantly evolving encyclopedia that lives on the internet, with contributions from scientists and amateurs alike. To transform the science of biology, and inspire a new generation of scientists, by aggregating all known data about every living species. And ultimately, to increase our collective understanding of life on Earth, and safeguard the richest possible spectrum of biodiversity. This video shares the vision.

Be The Change:

"What the Geese Taught me" is a short reflection on the power of working together.
