

daily GOOD

We will still need as many good teachers as ever. In their wise hands...the power of technology can be transformative. --Susan Headden

The Promise of Personalized Learning

As public budgets shrink, schools look toward online models for ways to improve student performance but, however cost-effective, they cannot replace the human element in teaching. Here's a hybrid model called blended learning in which computers help students achieve competency by letting them work at their own pace while teachers are freed to do what they do best: guide, engage, and inspire.

Be The Change:

Find ways to practice hybrid learning in your own life by appreciating the human element in what you do while utilizing the added help of computers.
